

HVAC and ServiceLink

Planned Maintenance and Reactive Callouts

ServiceLink will generate planned maintenance jobs automatically. Load in the data at the start of the contract and ServiceLink will generate the visits. Invoicing can be either job based, or for PPM contracts done on a repeating basis e.g. monthly , quarterly etc.

A complete history of planned visits , call-outs and quotes can be easily accessed.

A complete service history of each asset can be stored.

Details of each asset can be stored – any number of assets per site.

These illustrations show some of the details held for each asset

The screenshots illustrate the following data points for an asset:

- Asset Code:** L02092
- Status:** New Asset
- Product:** gas
- Description:** Gas Annual Service
- Model:** Service Combi Boiler
- Location:** (Field with 'Service Required' checkbox)
- Contract:** (Dropdown menu)
- Main Supplier:** (Dropdown menu)
